

# EnviroTestKits \$50

## WHY SHOULD YOU USE OUR SAFE HOME® TEST KIT? YOU ARE BUYING THE BEST

• **Laboratory Certified Testing for 5 contaminants:** A set of Water Quality Test Vials is inside of each package. We also provide you with a Return Mailer, FREE! We make testing for these 5 contaminants easy (Hardness, Nitrate/Nitrite, Copper and Lead). Your EPA Certified Lab Testing is paid for, with your price of purchase. Fill the vials with your water sample, fill-out the paper-work, place these items in the Free Return Mailer, drop it in your mailbox and receive your report by email. It's that simple!

• **Includes FREE Do-It-Yourself, Bacteria in Water Test Vial:** You conduct this test yourself (Total Coliform and E. coli) in the comfort of your own home. All drinking water test kits are not created equal. When you buy from EnviroTestKits®, you are purchasing the very best value in accuracy and dependability for your family's drinking water safety. This test kit is safe, easy to use and provides accurate results in 24 hours\*. (\*Speed of results may vary.)

We test for:

**In-Organics** – Nitrate/Nitrite

**Physical Properties** – Hardness

**Toxic Metals** – Copper & Lead

Maximum Contamination Limits {MCL's}  
are set by the EPA for human consumption.

Our certified laboratory testing provides the required accuracy to confirm if your water exceeds the Federal MCL's. Your results are emailed to you in just a few days.

### THE DIFFERENCE:

EnviroTestKit's® bacteria test vials provide you with advanced technology that our competitors simply do not offer. Our scientists have collaborated with some of the top drinking water scientists from around the globe (USA, Canada, Germany and India). We humbly provide the optimum technology for faster and more dependable results. We also use only "premium" media in our test vials and our vials have a special "tamper evident cap and seal". We also provide "certified sterility confirmation" with every lot of test vials and media. The combination of our advanced technology and quality control, keeps the test media and vial at a high level of integrity, longer. There is absolutely no question, that our Safe Home™ Bacteria in Water Test Kit offers you the very best in Drinking Water Testing.

**Bacteria Test Results in \*24 hours:** \*The speed at which your water sample incubates and in turn provides you completed results may vary. Follow the instructions in the test kit closely. A counter-top indoors or flat surface outdoors (in a low-light area and at temperatures between 70° – 95° F) is acceptable for incubation. Keep the test vial out of direct sunlight at all times. This product is designed to be used in remote areas without the use of commercial incubators. However, a sustainable optimum temperature is possible when using a qualified incubator. The optimum temperature for incubation is 95.0°F or 35.0°C (plus or minus 0.5°). We only recommend the use of incubators, when shorter incubation times are desired or if you intend to perform tests frequently. These incubators are available online and are quite affordable. When temperatures closer to 95°F (35°C) are sustained during the incubation period (and, or) higher populations of bacteria are present, test results for bacteria may be completed within 24 hours (+ or – 4 hours). Lower incubation temperatures (and, or) lower bacteria populations may cause final test results to take longer.
